

### Collection

Develop a code to store list of country names in **hashtable**

The application should prompt the user to enter the key

If key is found, display its value else display appropriate error message

Hint use: **ContainsKey()** method

---

### Generics

Develop a code to store customer details in list<> class

class customer

```
{  
    public int custid { get; set; }  
    public string custname { get; set; }  
    public string address { get; set; }  
    public datetime DOB { get; set; }  
}
```

### Write a logic to print the following

- a.      GetcustomerList()   Lists all details of customers
  
- b.      GetReport(DateTime dt1 , DateTime dt2)   : Lists all details between two dates
  
- c.      GetById(int cid) ): print customer details based on id
